

# Nationwide Spec Sheet

## Control Everything.

Let's face it—while we focus so much on keeping people flowing into our business, sometimes we have to limit who, when and where someone has access to the business. Automate your early morning deliveries, streamline your hiring process and wow your visitors with your controlled access environment and you're well on your way to sleeping easier when you've got us supporting you from the cloud.

## Secure. Control. Monitor.

Every business' security depends on the ability to properly secure the site with attractive mechanical or electrical hardware, control the site with cutting-edge access control and monitor the site with a back-end system designed to quickly and reliably modify access.

### Secure

Secure the perimeter with hardware designed to deny entry to even the most dedicated criminals and turn your castle to a fortress

### Control

Choose who's in and who's out from your desk or your bed without the clunky software  
Goodbye keycard admin, hello hiring manager.

### Monitor

Cameras timed to access? Check. Audit trail of who entered? Check. Quickly disable access? Check. Your feet up? Double check.

# Connect Everything.

That means we practice 360-Security. Your doors can talk to your computer who talks to your cameras who talk to your doors. It means the hardware on your door means more than its core components. It means your employees are as secure as your business.
